Edoradca sp. z o.o. desire to sell two special purpose vehicles so he has started to cooperate with Mergers Net Sp. z o.o . These companies implement projects related to the construct of biogas plants. In order to ensure the highest standards of safety for potential investors, we decided to use a dedicated tool offered by Mergers Net, namely the Virtual Data Room.

By using the Datapoint VDR system, potential investors had a round-the-clock access to the documentation of their own offices, which improved and accelerated the process of analysing the profitability of buying objects, which were offered for sale. Our usage of the tool, which is a market standard dedicated to conducting Due Diligence analysis also positively influenced the image of our company.

In our opinion, the application is very friendly not only for users, but also the managers of the transaction and people responsible for administration of documents. Loading documents, granting access rights or inviting users was intuitive and fast, limited to a few mouse clicks. The fact that at the end of the project Datapoint provides an encrypted CD with archived documents that were made available within Data Room and reports of user activity, is of great significance. This is a precious collection of information that can be used in the future.

We appreciate the cooperation with the Datapoint team. The professionalism and commitment of all the members had a significant impact on improving the efficiency of the process carried out by us.

DOTACJE UNIJNE

INWESTYCJE KAPITAŁOWE

We will gladly use services provided by Datapoint with any future projects implemented by EDORADCA.

Sincerely,

PREZES ZARZĄDU
