The Company of Polskie Koleje Linowe has used a tool dedicated to file sharing named Virtual Data Room, offered by the Datapoint, in connection with the privatization process. All in order to ensure an unrestricted access to all documentation while maintaining the highest safety standards at the same time. The process resulted in the signing of a share purchase agreement by the municipal company of Polskie Koleje Górskie, supported financially by the private equity fund Mid Europa Partners.

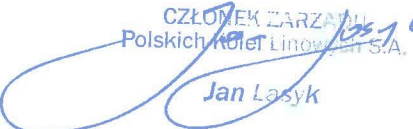

Through the use of a virtual data repository, all of the potential investors had a round-the-clock access any necessary documentation in a fully secured and controlled environment.

Virtual data room fully met our expectations. From the user's perspective it is a very intuitive and easy to use tool. From the point of view of the Seller and the Advisor, Brokerage House PKO BP, what deserves a special attention is the high level of security and the possibility of a full control over any documents posted in the repository. Thanks to all the dedicated features built into the system, the privatization process was very efficient and fast.

In addition to the application itself the Datapoint company offers a professional call and e-mail support throughout the whole project. Datapoint has a team that characterizes with a highly professional approach and openness to the customer and his needs.

Sincerely,
