Avallon Sp. z o.o. has partnered with Mergers Net Sp. z o.o. in order to allow an internal analysis of one of our portfolio companies. Thanks to the DataPoint VDR product, external entities have obtained a permanent, regardless of the location, access to business documentation of the audited company. At the same time DataPoint VDR system has given us a full control over the whole process - the use of activity reports helped to keep abreast of users' behavior and gave the knowledge about which documents were of most interest to them.

We believe that the greatest advantage of the VDR platform is the high level of documents' security, which has been guaranteed through a unique system of leveling permissions and access rights to files. As a result, we were sure that access to the system had only authorized persons.

DataPoint VDR system is easy to use, and requires no special IT knowledge, which contributed to the efficiency of its management.

The Datapoint Team also had a significant impact on our perception of the use of the DataPoint VDR application. The Team was always very helpful, providing valuable technical and organizational support during the whole project. It showed great commitment and professionalism and lived up to all the tasks set by us.

With full responsibility we recommend Mergers Net services for all those who appreciate high quality and are looking for verified, innovative business solutions.

Sincerely Yours,

A handwritten signature in blue ink that reads "Michel Kowalski".

AVALLON Sp. z o.o. is an independent Polish company, which manages private equity funds. The managing company AVALLON has years of experience in the execution of transactions together with managers - Management Buy Out (MBO). Since 2001 it has participated in several dozen MBOs and is considered to be a pioneer of this market in Poland.
