Poznań, the 20th of May 2013 r.

### References

PAMAPOL S.A. benefited from the services provided by Mergers Net Sp. z o.o. to facilitate with an external advisor, whose task was to assess the current situation of the company and work on a future development strategy of the Company.

Mergers Net Sp. zo.o. offers an application called 'Virtual Data Room Datapoint' (Datapoint VDR), used for safe and controlled sharing of any confidential files between independent organizations.

During particular stages of collaboration, they provide rapid access to confidential documents for Advisors and an opportunity to work on them continuously, which by the way was time-consuming yet a key element of the project. Because VDR provides unlimited and convenient access to documents from anywhere, 24 hours a day, 7 days a week, using only a web browser, we were able to increase the efficiency of corroboration and significantly reduce the time needed to develop desired solutions.

We decided to use this tool also because of the unique approach to safety which Mergers Net Sp. z o.o. complies with. The need to provide sensitive information outside requires paying a special attention to appropriate protection levels and thereby reducing potential risks. All security settings used in VDR guaranteed us an absolute control over all of our files and the entire process.

In our opinion, Mergers Net Sp. z o.o. is a reliable and recommendable partner to facilitate with and the VDR application is an indispensable tool for secure collaboration with external sites for any transactions.

Sincerely,

.....
