Etisoft Sp. z o. o. (the Company) cooperated with Mergers Net Sp. z o. o. with regards to the preparation of a safe environment for storing and sharing of confidential documents in the process of seeking a strategic partner. In order to ensure the highest safety standards when enabling access to documentation for potential investors, the Company decided to use a tool offered by Mergers Net, which is Datapoint Virtual Data Room (VDR).

Virtual Data Room is an extremely intuitive tool. Specially built-in features ensure an easy system management, enable coordinating the structure of the index and the differentiation of rights to particular files. Throughout the process, the Company had total control over uploaded documents, which was the main guarantor of security.

By using Datapoint VDR the process of sharing information has become more efficient. Documents were made available to all interested parties 24 hours a day, 7 days a week, which definitely increased the comfort of work for all users associated with the analysis of the provided information. Also users from time zones different to CET had the comfort of accessing data in their own preferred time.

Cooperation with Mergers Net Sp. z o. o. was extremely good, and therefore, we would recommend this company as a reliable business partner.

Sincerely,

ETISOFT Sp. z o.o.
